ToDAY's SNAKE of the DAY (Mon, Nov 5, 2012)

#110512

Amber

Female

d.o.h. 2009

48" long on October 31, 2012

\$200.00 shipped

This 2009 proven breeder female Amber has made beautiful Amber babies for us here at SMR. She's now in her breeding prime. Last year, she laid 27 eggs in her first clutch of the season.

Details:

Amber (no aka)

Most Commonly Used Name: Amber

Mode of Genetic Inheritance: Recessive

Morph Type: Mutation Compound (Caramel + Hypo A)

This compound recessive morph results from combining the two recessive color mutations, Caramel and Hypo A. Just as one would expect, the product of the two is a pleasantly yellow corn snake. Many mature to be virtually the same yellow as Butter corns, but with black pupils, instead of the pink eyes of their Amel counterpart, the Butter corn.
