

INTERSPECIES HYBRID

Striped Creamsicle (no aka)

Most Commonly Used Name: Striped Creamsicle

Mode of Genetic Inheritance: recessive corn snake Amel + Emory's Rat Snake

Morph Type: Recessive **HYBRID** mutation

Eye Color: **Red** pupil & *body ground colored* iris

Except for the Striped mutation, this morph is just a pattern variant of the Creamsicle HYBRID mutation.

Formerly considered an intergrade of what *used to be* two corn snake subspecies (*Elaphe guttatus guttatus* X *Elaphe guttatus emoryi*), Creamsicles are the final product of crossing the Emory's Rat (aka: Great Plains Rat Snake) snake with an Amel corn. Since the new taxonomic classification assigns distinct species to each (*Pantherophis emoryi* and *Pantherophis guttatus*), Creamsicles are now officially considered **HYBRIDS**. ANY progeny from Creamsicles or any corn snake that has any degree of Emory's Rat Snake in it, is considered a HYBRID. The albinos are called Creamsicles and the non-albinos are called Root Beers.

What to expect:

The Striped mutation slightly enhances the saturation of the Creamsicle coloration, but otherwise, they're just what you'd expect; a striped version of the basic Creamsicle hybrid. There is very little change in appearance from hatchling to adult.

SURPLUS section of this web site). We do not provide pictures of individual hatchling snakes for sale, nor do we recommend that you ever choose a new pet based on an image of its neonatal form. Corns change so dramatically from hatchling to adult, they will NEVER have the same colors or contrasts throughout maturity. While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively clones of each other, the nature of polygenic variation results in each animal being similar but not identical to others of its morph. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously, and therefore publish the guarantee that we will exchange your SMR snake if it does not mature to be like our advertised examples.
