2015 male Buckskin Okeetee corn snake is currently about 16" long, eating frozen/thawed pinky mice. It's potentially important to note that the lineage of this snake has never included Tessera. There are several sellers lately selling Okeetees and Miamis without mentioning this heritage. If someDAY it is discovered that Tessera has hybrid origins, it will be important to know if you have such hybrids in your breeding inventory. His \$155.00 USD price includes BTW, NO Tesseras in this beautiful corn's heritage.
