This 16" 2016 male Buf Tessera is currently eating frozen/thawed pinky mice. Both (Buf and Tessera) mutations are dominant-to-wild-type, so breeding this snake to virtually ANY corn snake will render some Bufs, some Tesseras, and some Buf Tesseras-in addition to what other genes are in the parents, as long you hatch enough eggs per brood to demonstrate all genetic potentials? His \$255.00 price includes
