Hurricane Butter Motley

Male

d.o.h. 2012

18" long on Dec. 21, 2012

\$100.00 shipped

Hurricane Butter Motley (no aka)

Most Commonly Used Name: Butter Motley

Mode of Genetic Inheritance: Recessive

Morph Type: Mutation Compound (Butter + Motley)

Eye Color: **Red** pupil

The good concentric markings go most of the way down the backs of good hurricane-patterned Motleys. This pattern is sometimes (though rarely) referred to as bullseye motley or donut motley. They got the name "hurricane" not for the circular markings on the back, but for the broad concentric margins around the circles, that resemble the hurricane symbol on weather maps.

This compound morph results from combining the color mutations Amel + Caramel = Butter and the pattern

mutation, Motley. Color and pattern are variable, but it is apparent that the Motley mutation has a beneficial color impact upon the Butter corn's coloration, and that impact is one of enhancement. I don't recall ever seeing Striped or Motley Butter corns that was not more deeply yellow than Butter corns without a pattern mutation.

Important Note:

These images are not renderings of the actual animals being offered, (except for uniquely offered snakes found in the SURPLUS section of this web site). We do not provide pictures of individual hatchling snakes for sale, nor do we recommend that you ever choose a new pet based on an image of its neonatal form. Corns change so dramatically from hatchling to adult, they will NEVER have the same colors or contrasts throughout maturity. While most of the snakes we produce will mature to resemble the featured adult image(s) on our web site, unlike manufactured products that are respectively clones of each other, the nature of polygenic variation results in each animal being similar but not identical to others of its morph. The snake we select for you may not mature to be identical to the pictured examples, but will be chosen based on our experience of observing which neonates will mature to properly represent their respective morph. We take this responsibility very seriously, and therefore publish the guarantee that we will exchange your SMR snake if it does not mature to be like our advertised examples.
