{product id=814}

This 2013 female Butter Tessera is now 27" long eating frozen/thawed large fuzzy or small hopper mice every five to seven DAYS. Her \$550.00 usd price includes

Deserving of her price, she offers great 2015 breeding potential. If bred to any Butter, approximately 50% of the babies will be some pattern variant of Butter Tesseras and the other 50% will be Butters of one variation or another (since her grandfather was a Striped Butter). Breeding her to a Common corn that is het for Striped Butter will render *some* Butters, Butter Tesseras, Amels, Amel Tesseras, Caramels, Caramel Tesseras, Tesseras, and who knows what else (since so many corns toDAY have surprise genes)? That's four different colors of Tesseras. If you hatch enough eggs, you *could* get all four colors and possibly different patterns in the same brood, but proportions are not very predictable unless you hatch many eggs from her.

Same snake in different pose.
