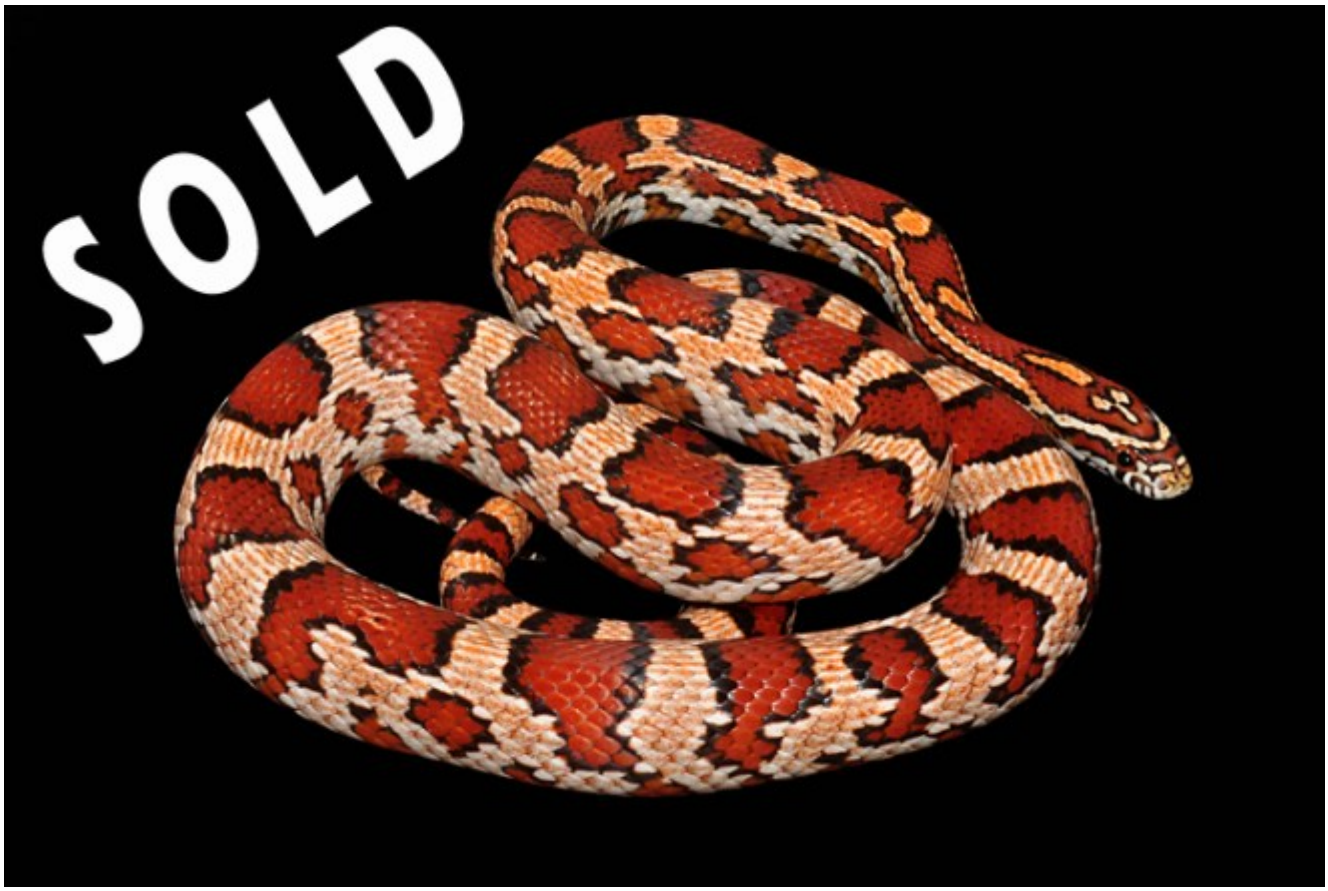
Show & $ell



This 34″ 2013 female Corn is the progeny of a Huddleston Reverse Okeetee to a Tessera, so in typical collateral Tessera fashion she demonstrates extreme coloring, AND is het for at least Amel. She is currently eating frozen/thawed small adult mice. She brumated from October 20, 2014 to February 20, 2015. Her $225.00 price includes
