UPDATE, April 7, 2018 - she is now 20" long, eating frozen/thawed fuzzy mice.

This 2017 female hatchling Honey Tessera is currently 14" long, eating frozen/thawed pinky mice. One of her parents was tested for Star-gazing gene possession-proven not to carry that gene-but other the parent has not yet been tested. Note that even though the untested parent has NEVER produced any SG mutants, until proven via breeding trials, like ALL untested corn snakes, it is still suspect as a carrier for the gene mutation, Star Gazing. Her \$225.00 price includes
