Male

d.o.h. 2010

33" long on October 20, 2012

\$165.00 shipped

Comments:

Possibly Het Amel.

Lavender Motley (no aka)

Most Commonly Used Name: Lavender Motley

Mode of Genetic Inheritance: Recessive

Morph Type: Triple Mutation Compound

Eye Color: *Redish* pupil & *body ground colored* iris (see details below about some having Black pupils)

This Double mutation is the product of the color gene mutation, Lavender, and the pattern mutation, Motley. As with many Lavender morphs, eye pupils can be red/pink or black.
