

Show & \$ell

This 19" 2015 male Leucistic Texas Ratsnake from wild-caught Leucestic Texas Ratsnake found in Mineral Springs, Texas. He has a minor pinch on the tip of the tail that will surely cause complete necrosis of that region and consequent lose of the very tip. I'm certain that the tail will look normal when this snake matures, since so little of the tail tip is affected. He is currently eating frozen/thawed large pinky mice. His \$115.00 USD price includes **Bonus pics**

Same snake in different pose.

Macro shot of the pinched tail tip.
