

Show & \$ell

{product id=1736}

This 2017 male Anery Tessera is currently 12" long, eating frozen/thawed pinky mice. He is het for Sunkissed and either Ultra OR Amel (see **PROJECT** details below). His \$275.00 USD price includes

Sunkissed Ultra/Ultramel Anery Tessera PROJECT

All hatchlings from the following adults are, of course, Anery mutants since that was the only gene mutation common to both parents. Father is a Sunkissed Anery and Mother is an Ultramel Anery Tessera so the double-mutant Anery Tessera progeny of this pairing are het for Sunkissed and either Ultra ***OR AMEL***. I italicized ***OR AMEL*** because IF the mother of this year's progeny is an Ultra Anery all of the babies from this pairing will be het for Ultra

and Sunkissed. If-as labeled on her cage-the mother (pic'd below) is an Ultramel Anery Tessera, half of the progeny will inherit one copy of Amel and the other half will inherit one copy of Ultra, BUT there is no way to distinguish between them.

Males are \$275.00

FATHER of the 2017 Anery mutants being offered:

MOTHER of the 2017 Anery mutants being offered:
