#042813

Motley Het for Striped Honey

Female

d.o.h. 2011

37" long on Sept. 22, 2013

\$300.00 shipped

The parents of this snake consist of a Striped Tessera and a Honey. Due to Tessera parentage, I expect F1s from this original pairing (including this female) to promote better striped pattern for Sunkissed and Honey mutants, a nearly impossible feat toDAY. She is 37" long and will be put into brumation next weeweek of not sold. Currently eating frozen/thawed adult mice. The \$300.00 price includes domestic overnight FedEx shipping to any of the lower 48 contiguous states.
