

Show & \$ell

{product id=2175}

This 2019 FEMALE Scaleless Butter corn snake is currently 13" long, eating frozen/thawed DAY-old pinky mice. The orange markings will gradually change to bright yellow, rendering an all yellow adult, but there WILL BE a contrast between two different yellows; Markings VS. Ground Zones. \$1250.00 plus \$39.00 You can see how "bony" corn snakes can look without clothing (scales). Even as adults, if there is little color on the sides of some Scaleless corn snakes, the ribs show.

Not only a fascinating phenotype, when adult, breeding this snake to a common corn without any copies of mutant DNA the offspring could produce Commons, Amels, Caramels, Butters, Scaleless Commons, Scaleless Amels, Scaleless Caramels, Scaleless Butters and possibly more, since toDAY's featured Scaleless Butter is possibly het for the Striped gene mutation.

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless), AND even possible-hets are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled siblings) are inter-species hybrids.
