

## Show & \$ell

{product id=2039}

This 2016 male 28" Scaleless Tessera corn should be ready to breed in the summer of 2019? He is het for Caramel and Amelanistic (therefore, het Butter) and he is currently eating frozen/thawed hopper mice. \$1665.00 plus \$39.00

**BONUS PIC . . .**

ToDAY's SOTD featured Scaleless Tessera looks like he's sheltering his eyes from all of the camera flashes (can't blame him), but it's perhaps parallel to the Ostrich head-in-the-sand phenomenon because it's utterly rare for a snake to cover its eyes to protect from sun, but surely if they can't see the camera in my hands, he may have felt like he was hidden from me?
