

Thank you. Andreas Bacchi for sending these beautiful 2017 Pied-sided Bloodred Motleys. Like all Bloodreds, they don't show much color at this age, but in the coming months, the neonatal colors will be slowly replaced by vibrant reds. Bloodred and Motley mutations are known for enhancing colors, so I'm excited to see a synergistic exaggeration of colors in these snakes that are homozygotes for Bloodred, Motley AND Pied-sided.
