

Photographed while soaking in a clear deli cup of water in 2017, is a Scaleless Reverse Okeetee corn snake. The egg tooth is still slightly visible at the snout, indicating that this snake had been out of its egg for less than 24 hours. ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless) are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled siblings) are inter-species hybrids.
