

Common corn het for Stripe and Sunkissed

Male

d.o.h. 2011

29" long on December 29, 2012

The parents of this snake are comprised of a Striped Tessera and a Sunkissed. Due to parentage, I expect F1s from this pairing (including this male) to promote better-striped pattern for Sunkissed mutants; toDAY, a nearly impossible product.
