

Striped Corn Het Blue Motley (he MAY also be a Tessera)

Male

d.o.h. 2011

28" long on Jan. 19, 2013

*This 2011 hatchling male is either a Visual-Het Striped Tessera Mutant, or a merely a Striped Mutant (albeit virtually perfectly striped). Whichever pattern mutation he turns out to be his parents were Tessera Het Blue Motley (aka: Dilute Anery Motley) bred to a Blue Motley. Therefore, this snake is het for Dilute and Anery (aka: Blue).*
