Ultramel Motley

Female

d.o.h. 2007

\$175.00 shipped

Comments: Feeding on frozen/thawed adult mice, this 2007 female Ultramel Motley was brumated (hibernated) from October 10, 2012 to January 31, 2013 so she should be ready to breed in a matter of weeks. Yes, almost six year-old, but still pumping out the eggs, she produced 19 fertile eggs in 2012. She's very dark for an Ultramel, but as I recall, she is not an Ultra??
