This 25" 2014 female corn *could be* a Snow, a Blizzard, or Both? Her parents consisted of a Snow and an Amel that were from the pairing of a Blizzard to a Coral Snow, so this could also have one copy of the gene mutation, Red Factor. She is currently eating frozen/thawed fuzzy mice. The green borders that are barely seen should saturate/intensify with maturity. The inheritance of this phenotype is poorly understood, so we don't know if the green is a result of a gene mutation or polygenics?? Her \$215.00 USD price includes . . .
