Striped Tessera

Female

d.o.h. 2011

40" long on February 21,, 2013

\$450.00 shipped

This 2011 female Striped Tessera is now 40" long and eating frozen/thawed adult mice. Both parents are Striped Tesseras and she is also possibly het Amel and Caramel. If she is a Super-form (aka: a homozygote) Striped Tessera, breeding her to any type of corn will result in 100% Tessera progeny. She was brumated (hibernated) from October 10, 2012 to January 31, 2013 so she should be ready to breed in just a few short weeks.
