This 19" 2014 male Super Salmon Snow Corn is a shocking example of the **CORAL** color that's possible in some corn snakes. He would be an awesome contributor to the future project of reproducing super-pink Scaleless corns. He is currently eating frozen/thawed medium to large pinky mice. He is called SUPER because he is a homozygote (possesses both gene copies) of the mutation that causes the predominant exaggeration of pink/coral; Red Factor. His \$345.00 price includes
