

Show & Tell

Relatively boring in the color department, this 2019 hatchling Scaleless Butter will be very yellow as an adult, AND will eventually reveal more of her pattern (difficult to see at this tender age). Probably just *polygenetically* striped (VS. being a Striped mutant) since she shows dotted dorsal pattern toward and on the tail?

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless), AND even possible-hets are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled relatives) are inter-species hybrids.
