

## Show & Tell

Sibling 2019 hatchling aberrant Scaleless Amels that hatched in late February. They are possibly het Caramel, and will be offered for sale as soon as they have fed three consecutive times on unaltered frozen/thawed pinky mice. They both instantly gobbled their first meals, as most Scaleless corns do, so it won't be long before these two—and many others—are listed for sale.

*note:* ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation—aka Het Scaleless), AND even possible-hets are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled relatives) are inter-species hybrids.
