

Show & Tell

2019 hatchling Scaleless Butters and Amels that hatched in late February. Aside from healthy Scaleless Amel-types typically showing their ribs, you can see the location of the heart in the lower-front snake (purple mass that is only barely visible in scaled Amel-types).

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless), AND even possible-hets are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled relatives) are inter-species hybrids.
