

## Show & Tell

Male and female 2019 sibling Scaleless corn snakes that hatched in late February. It appears that the non-Amel in this picture could be a Red Factor mutant (parents both het for Scaleless Sunglow Motley). Such elongated pattern aberrancy is not rare in Scaleless corns.

*note:* ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless), AND even possible-hets are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled relatives) are inter-species hybrids.
