

## Show & Tell

Two 2015 hatchling Scaleless "Corn" Snakes, Amelanistic and a potentially Bloodred (parents of the latter were het for P/S Bloodred, Sunglow, Motley and Scaleless). ALL Scaleless corns in the hobby toDAY derive from the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake) and are therefore technically inter-species hybrids. Thank you, Jud McClanahan in Salina, Kansas, for making these beautiful snakes.
