

Show & Tell

Yes, compared to its scaled siblings (Butter and Striped Butter) this Scaleless Butter doesn't show much yellow. NOT YET! The only visible pattern on the Scaleless Butter would initially lead someone to believe it's also a Motley mutant, but it is not Motley. Since part of the pattern layer(s) are missing on most Scaleless corns, the most visible pattern are the circular ground color zones between markings. Pic 2 demonstrates how much yellow the 2018 Scaleless Butter will exhibit a year from now, via comparison to a 2017 Scaleless Butter that started life with the same modest expression of yellow. . . .
