

Show & Tell

Comparison of a 2017 hatchling SMR Fluorescent and two 2018 hatchlings from the same parents. You can now see why I don't sell them until they're a few weeks old-other than making certain they love frozen/thawed pinky mice, (see pic of them from March 5, 2018, SOTD below). The yearling in this pic will mature to have even more saturated colors, through maturity. Both classically marked Fluorescent AND Banded Fluorescent hatchlings will soon be advertised on our web site.
