

Each DAY at 11:00 am. ct (GMT - 5) we will post a different SMR snake being offered at a special price.

All snakes will be chosen for their rarity and/or unique beauty.

FREE U.S. SHIPPING for each Snake-of-the-Day.

toDAY's SNAKE of the DAY (Mon. April 15, 2013)

{simpleproduct:id=585}

Details

#041513

Cross from Java x Kastanie

Male

d.o.h. 2011

26"+ long on April 12, 2013

\$175.00 shipped

Comments: Prospect of new morph as a result of this genetic pairing.

This 26" 2011 hatchling corn is the product of pairing a Java corn with a Kastanie mutant and is now eating frozen/thawed fuzzy mice.

What is Java? Is it a Kastanie, a separate (and new) mutation, or just a polygenic production that's similar to Kastanies? IF Java is actually Kastanie, these are pure Kastanie mutants. If Java is something new, these babies are double hets, and if Java is just a polygenic color modifier, these are beautiful corns that are het for Kastanie??
