

This 32" small adult male corn snake is het for Scaleless. He is currently eating frozen/thawed small adult mice. One of his parents was a Scaleless Hypo Sunkissed corn, so he is het for Scaleless AND Sunkissed and Hypo A mutations.

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless) are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake) and are therefore technically inter-species hybrids.
