ToDAY's SNAKE of the DAY (Tue. April 16, 2013)

#041613

Common corn het for Stripe and Sunkissed

Male

d.o.h. 2011

32" long on April 15, 2013

\$175.00 shipped

The parents of this snake are comprised of a Striped Tessera and a Sunkissed. Due to parentage, I expect F1s from this pairing (including this male) to promote better striped pattern for Sunkissed mutant progeny of this male. Many corns that have only one copy of the Sunkissed mutation (aka: Heterozygote) really show their Sunkissed ancestry. This one has very deep orange colors for his age and will surely have twice the "sunkissed" color saturation at maturity.
