

Show & Tell

Eggs from a pair of Scaleless Corn Snakes het for Striped Butter. All Scaleless corn snakes in the hobby toDAY are hybrids between the original pairing of a Corn Snake to an Emory's Ratsnake. I know, I know, where's the damp moss? I actually removed the Sphagnum Moss nest box from her cage when I saw that she was about to lay eggs. I do not recommend doing this, but as long as gravid females are checked two or three times daily AND do not have a water bowl in their cage in which to drown eggs (rare, but happens), little risk is taken. What is the saying, "*don't try this at home. I'm a professional*"?
