

This 14" female 2019 Scaleless Butter Motley corn snake is currently eating frozen/thawed newborn pinky mice. Ps, the zones that look orange now will turn bright yellow when this snake is mature. None of the orange seen toDAY will be there later.

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless) are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled siblings) are inter-species hybrids. . . .
