

## Show & Tell

The first 2017 High-white Reverse Okeetees hatched on May 2nd, so they will be feeding and ready for shipping before June 1st. Like most Reverse Okeetee and Fluorescent types, these show very little promise of the extraordinary color theme they will exhibit after a few months of meals. I know, right? They look so BLAHHH? BUT like all corns, they transform into amazing adults that will end up looking like their parents.
