

## Show & Tell

Certainly not *namesake-remarkable*, most hatchling Scaleless Butter corns (like this 10-DAY-old) show little yellow at this age, BUT the few 2016s that are growing up here at SMR have demonstrated increased saturation of color with maturity. Our oldest is now just over one year old, so our observations are not necessarily demonstrative of all Scaleless Butter corns.

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation—aka Het Scaleless) are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake) and are therefore technically inter-species hybrids.
