

Show & Tell

Close-up shot of the heads of two Scaleless corn snakes. Just as seed-less grapes actually have seeds, scale-less corn snakes have scales, though largely random in body location and NEVER like scales on other corn snakes, except that most Scaleless corn snakes have almost classically scaled bellies like their nominate form.

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless) are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled siblings) are inter-species hybrids.
