

Show & Tell

Another brood of Amel Tesseras just hatched. Shown are some Amel Tesseras and Striped Amel Tesseras from extreme white Amel Tessera parents. Though extremely rare the potential, one or more of these COULD be Homozygote (aka: Super Form) Amel Tesseras since both parents were Amel Tesseras. There is currently no visual distinction between the 99.9% of all world-wide Tesseras that are Visual-Hets and their utterly rare homozygote Super Form counterparts (perhaps fewer than three in the world toDAY?).
