

Show & Tell

2013 Zagtec Amel Corn Snake. The name, Zagtec (coined by KJ and Kasi Lodrigue) generally derives from the visualization of two pattern variation terms, Zig Zag and Aztec. However, the actual pattern has nothing to do with the combination of those two polygenetic pattern renderings. These are simply selectively-bred for this phenotype. Perhaps Zagtec is more of a way of saying, “it’s neither ZigZag OR Aztec”?

Bonus Pic . . .
