

The Snake-of-the-Day headliner of this web site features photographs that we believe will interest our web site visitors. Each daily photograph will be posted at 11:00 am. central (GMT - 5) and replaced in 24 hours. Feel free to make **suggestions** regarding what snake photographs you would like to see in this daily feature. The animals pictured here are not for sale, unless otherwise noted, but you can find available surplus snakes for sale on the **Surplus Page** of this web site. We appreciate your patronage and welcome any **suggestions** you may have.

Part of a brood of 2013 corns hatching yesterDAY from parents that were both products of pairing a Rosy Bloodred (aka: Diffused Kastanie) to a Sunkissed corn. The grayish Sunkissed mutants are Sunkissed Kastanies contrasted by a typical Sunkissed mutant in the lower-left corner. The non-pattern mutants in the upper left-hand corner are Kastanies. They look like Anery mutants at this age, but will begin developing Kastanie colors in the coming weeks and months. I know what you're thinking. With Anery mutants slitherin around in there, the Sunkissed corns are actually Sunkissed Aneries. Anery is not in either side of this family tree AND most of my hatchling Kastanies look like Aneries at this age.
