

Show & \$ell

{product id=1952}

This 13" female 2018 Scaleless corn snake is currently eating small frozen/thawed pinky mice. I don't often name snakes, but when this lil girl was absorbing her yolk (while she was still in her egg) at first glance, she appeared to be winking at me, so I named her WINK. Naturally, it was obvious that she had no right eye. Upon closer examination-after she was out of the egg-I felt a dorsal kink above her cloaca (where the retained skin is showing in this pic). After this pic she sloughed the tail skin. I'm selling her at a PET GRADE price that's half the value of most Scaleless corn snake hatchlings. She has eaten five frozen/thawed pinkies, and has never refused a meal. Her \$225.00 price includes If we use a shipping airbill from YOUR FedEx account, deduct \$60.00 from the above price.

note: ALL Scaleless corns in the hobby toDAY (including SCALED corns that are carriers of the Scale-less mutation-aka Het Scaleless) are descendants of the original pairing of a Corn Snake to an Emory's Ratsnake (aka: Great Plains Ratsnake). Therefore, all Scaleless corns (and their scaled siblings) are inter-species hybrids.
