This 2016 male Super Salmon Snow corn snake is so named SUPER because he has both of the paired gene copies of the Dominate-To-Wild-Type Red Factor mutation, making him twice as colorful as Visual Het Snows that have only one of the paired gene copies. In the course of one more year of maturity, he will be notably more color-saturated as he is now. He is currently 24" long, eating large frozen/thawed large fuzzy mice. His \$265.00 USD price includes
