

Show & Tell

This 2015 Scaleless Caramel corn snake (and others) will be listed for sale in a few weeks after they have shed this week and fed a few times thereafter. Scaleless are one of the best-feeding corn snake morphs, so they will all eat frozen/thawed pinky mice every time they're offered (have not had an exception yet). All Scaleless corns in the hobby at this time are Inter-species hybrids since they all originate from the original pairing of an Emory's Ratsnake (*Pantherophis emoryi*) to a Corn (*Pantherophis emoryi*).
