

The Snake-of-the-Day headliner of this web site features photographs that we believe will interest our web site visitors. Each daily photograph will be posted at 11:00 am. central (GMT - 5) and replaced in 24 hours. Feel free to make **suggestions** regarding what snake photographs you would like to see in this daily feature. The animals pictured here are not for sale, unless otherwise noted, but you can find available surplus snakes for sale on the **Surplus Page** of this web site. We appreciate your patronage and welcome any **suggestions** you may have.

The left image shows three Kastanie mutants, two of which are from the U.S. line discovered in Florida Key Corns. The far-right head in that image belongs to a Kastanie whose parents were both from the German line started by Frank Schaub. Typical of SMR German Kastanies, when mature, this hatchling will have a redder head than the U.S. Kastanies. The German lineage Kastanies I have will display generally darker colors at maturity, while the U.S. Kastanies tend to display a brighter orange overtone. Many Kastanies resemble neonatal Anery mutants when they first hatch, quickly putting on color in the first months of maturity. The adult Kastanie on the right is the mother of the hatchling German Kastanie pictured on the left.
