

Show & Tell

Super Coral Snow Corn Snake -DAY 2 of 4

July 23 through July 26, SMR Daily S.O.T.D. and simultaneously published Daily SMR Facebook Features will exhibit variants of some of the *Coral Snow Mutant Complex*. The four primary familial representatives of this complex include, Salmons (started by Jim Stelpflug), Champagnes (started by Pasco Paul), Bubblegum Snows (not to be confused with Bubblegum Ratsnakes, hybrid production of Albino Ratsnake X Amel Cornsnake) started by the late Lloyd Lemke, and Neons (refined by Stephen Wagner via enhancement of the colors in Lloyd Lemke's Bubblegum Snow line). They the only four known to be the primary lines from which virtually all modern Coral Snow Corns are variants thereof. To my knowledge, there is only one person who can visually identify which of the four primary families of Coral Snows are exhibited in the Coral Snow types that will be exhibited from July 23rd to July

26th. No pressure, right, *Marsha Matthews* of poppycorns.com?
