

Show & Tell

Two 2047 Scaleless Amelanistic corn snakes. The one on the LEFT in this picture is about one to two months older than the other and was about as pale as the one on the RIGHT when it first hatched. The LEFT snake in this pic was sold last week and the other will be listed for sale in a week or so. Both have RedFactor ancestors, and should intensify in color with age, but even without that red-modifier (RedFactor Gene Mutation) they will both get richer colors as they mature.
