

Show & Tell

A yearling corn snake that escaped in the Nursery Building a few weeks ago. Place the trap on the floor next to the wall, since most errant snakes will follow walls. I dumped out what attracted it to the Funnel Trap (some used mouse cage bedding). He ate the two fuzzy mice that were also in this double 2-liter bottle trap. If desired, a funnel on both ends and an extended barrel (using two bottles) sometimes enhances capture success. Details and [S . . .](#)
