

Show & Tell

A gender pair of Gray-banded kingsnakes (*Lampropeltis alterna*) I purchased at the NRBE in Daytona Beach, Florida last week. Great color for their young age, but still refusing cleaned frozen/thawed pinky mice. It is important to ask the seller what young GBs are eating before you purchase. Me, I didn't care since I have been converting GBs to pinkies for over 30 years, but some of you out there may not adapt to the processes of converting them to pinkies.
