

Show & Tell

LOTS of black mixed in with the lateral white of this 2016 Striped Pied-sided Bloodred corn snake. Note, also, the lateral purely red/orange patches in the lower middle body zone in this picture? If she follows in the foot prints of her SMR ancestors she will be much redder when she's another year or two older. . . .

< style="font-size: 12.16px;" />

Same snake in different pose and lighting.
