Striped Tessera
Female
d.o.h. 2011

24" long on Nov 6, 2012

This 2011 hatchling female is either a Visual-Het Striped Tessera Mutant or a Striped Tessera homozygote (aka: Super-Form) Mutant. Both parents are VISUAL-Striped Tesseras. She is also possibly het Amel. If she is a Super-form Striped Tessera, breeding her to any type of corn will result in 100% Tessera progeny.
